Concurrent and Real-time Programming Manuel I. Capel,2025-09-25 This textbook provides a comprehensive exploration of the principles of concurrent programming focusing on both theoretical foundations and practical implementation techniques Its content ranges from basic concepts such as thread creation and process management to more advanced topics such as inter process communication synchronization mechanisms and memory management It includes discussions on monitors MPI RMI rendezvous and rate monotonic analysis providing both foundational knowledge and practical solutions The book is divided into four chapters each building on fundamental aspects of concurrent and parallel programming Chapter 1 introduces concurrent programming by explaining key concepts such as processes as independent execution units that perform tasks concurrently concurrency models using techniques like mutual exclusion and

synchronization primitives and process creation through methods like fork join and POSIX threads Next chapter 2 explores key process synchronization mechanisms in concurrent programming focusing on both mutual exclusion problems and the use of monitors as a high level solution for managing shared resources Chapter 3 then focuses on message passing systems as a fundamental approach for communication and synchronization in distributed systems where processes cannot share memory and provides models like CSP and technologies like RMI to facilitate structured reliable communication between processes Eventually chapter 4 dives into the scheduling mechanisms of real time systems focusing on how tasks are prioritized and scheduled to meet strict timing constraints with algorithms to address priority inversion while considering sporadic and aperiodic tasks This book is designed to be used as a textbook for undergraduate and graduate courses in concurrent programming operating systems and distributed systems Its well structured layout comprehensive case studies numerous exercises and illustrating real world examples make it an ideal teaching resource **Real-Time Systems Symposium** ,1986 Proceedings of the ACM SIGPLAN 1995 Workshop on Languages, Compilers, and Tools for Real-time Systems, La Jolla, CA, June 21-22, 1995 ,1995 Concurrent Programming Gregory R. Concurrent Programming in Java Douglas Lea,1997 This book provides you with detailed information and expert techniques that will enable you to exploit the many advantages of concurrent programming and create multi threaded Java applications that are more responsive to user demands faster and more easily controlled Taking a design pattern approach the book offers numerous standard design techniques for creating and implementing Java structures that solve common concurrent programming challenges Doug Lea is Professor of computer Science at SUNY Oswego Co director of the Software Engineering Lab at the New York Center for Advanced Technology in Computer Applications and Adjunct Professor of Electrical and Computer Engineering at Syracuse University **Structures of Discrete Event Simulation** John B. Evans,1988 The book presents a philosophy for simulation modeling and a new simulation language It gives an overview of the development of mainly discrete event simulation the techniques and data structures that this development brought along and the impact it had on general computer science In fact many seminal ideas coming up in modern operating systems and concurrent programming like data structures that make algorithms fast have their origin in discrete simulation
