

# Qualitative-Interpretive Methods in Policy Research

The use of qualitative methods in policy research is not new. Academic scholars and policy analysts have for some years been venturing out into the “field” as ethnographers or participant-observers to study first-hand the experiences of legislators, implementors, agency clients, community members, and other policy-relevant stakeholders. Others have based qualitative studies on in-depth interviews with various policy actors; and still other studies draw on legislative, agency, and other documents.

What is new, however, in methodological circles is a greater attention to making the steps of such analyses more transparent. On the one hand, this makes it easier for students and others to learn how such studies are carried out. At the same time, such transparency enables critics and skeptics of the scientific standing of such research to see that they are not impressionistic, that they have regularized procedures, and that they can yield trustworthy analyses, although these procedures and standards may be—indeed, are—different from those used in other forms of research. Part of this transparency involves making clear that qualitative methods have a long-standing history of philosophical exploration and argumentation that supports their procedures and evidentiary claims at a conceptual level. It has become increasingly important to be explicit about what these philosophical groundings are, and so this chapter includes a brief summary of several of the central presuppositions and their ideational sources. Another part of this transparency involves attending quite carefully to the language used in talking about methodological concerns and methods procedures. This has led to a shift in many circles from talking about “qualitative” methods to a discourse of “interpretive” methods. This shift has taken place because of the so-called “interpretive turn” in the social sciences quite broadly (see, e.g., Rabinow and Sullivan 1979, 1985), but also because of the greater awareness of the philosophical presuppositions undergirding *all* research methods and an increased desire to ground methods discussions in their attendant methodologies.

The approach I sketch out here rests, then, on “taking language seriously” (to draw on Jay White’s article and book titles; White 1992, 1999) and also on the very philosophical presuppositions that undergird these methods and methodologies. I begin with an explanation and defense of the interpretive turn, not only in conceptual terms but in methodological ones as well, as a more fitting name for this form of research. As this rests on philosophical argumentation, in the second section I summarize some of the main points from interpretive philosophies that inform interpretive methods. These suggest some of the central characteristics and themes of interpretive methods, including some of the central issues raised today in methodological discussions. Entire chapters and volumes have been written about these several interpretive methods. Here, I will sketch out the entailments of interpretive methods for accessing or generating data. The chapter concludes with very brief notes on some of the interpretive methods used in analyzing such data in the context of policy research. There are many more than I have space for here, and the reader is encouraged to use the references to pursue these.
